

ABSTRACT OF THE DISCLOSURE

The present invention concerns a rim cover structure with glittering lights which provides glittering lights on the rim cover during the spinning, adding safety and prettiness. It mainly has light-emitting components installed on
5 the adorning surface of the rim cover, inside the installed concaves or behind the penetrating openings, so that when the tire is in motion and vibrates, it will activate the Light Emitting Diode of the light-emitting component, in turn becoming a product with true effectiveness and promote the utility value of the said product.
